

Gen IV Controller **Anybus Instructions**

From the main menu, select Controller.

Run	PSet
Job	RESULTS
Controller	Tool
Accessories	DIAGNOSTICS
LOGIN	Advanced

Select Communication Interfaces.

Controller Configuration Menu	
Tool Setup	ΙΟ
Communication Interfaces	Protocols
Front Panel Buttons	Power Up
BarCode Setup	Set Time
Remote Connections	Master Spindle Setup
Languages	

Select Anybus.

Comr	nunications Menu	
	Ethernet	Second Ethernet
	System Port	Serial
	ANYBUS	Spindle USB
	Serial USB	

DeviceNet

	ANYBUS Configuration		
DeviceNet is	Module Type	DeviceNet	
one of three	Firmware	2.10 1	
open network	Serial Number	A0:31:2A:BF	
standards	Module State	WAIT PROCESS	
(DeviceNet,	Network Supervised	No	
ControlNet	A CONTRACT OF A		
and EtherNet/	Node Address	1	
IP), all of which			
use a common	G	enerate EDS	
application			_

layer, the "Common Industrial Protocol" (CIP).

DeviceNet covers the main part of the applications where small to medium amount of data with short to medium cycle times (1ms to 500ms) can be exchanged in the network.

Node Address: Configures the Anybus node address for controller.

CC-Link

CC-Link is a Fieldbus network that processes both cyclic I/O data and acyclic parameter data at high speed. CC-Link was developed by

ANYBUS Configuration		
Module Type Firmware Serial Number Module State Network Supervised Occupied Stations Extension Cycles	CC-Link 1.06 1 A0:26:CF:24 PROCESS ACTIVE Yes 2 -	
Station Number		1
Baud	156 kbps	~
CC-Link Version	1.0	~

Mitsubishi and today, it is managed by the CC-Link Partner Association (CLPA). CC-Link is a very popular network in Asia.

CC-Link is a Fieldbus for high-speed communication between controllers and intelligent field devices like I/Os, sensors and actuators. In networks with up to 65 stations.

Station Number: Configures the station number for the controller. Valid entries are 1 - 64.

Baud: Configures the controllers baud rate. Configure it to match the CC-Link network baud. Valid values are 156kbps, 625kbps, 2.5Mbps, 5Mbps, and 10Mbps.

CC-Link Version: Configures the controllers CC-Link version. Configure it to match the attached network. Valid values are 1.0 or 2.0.

Profibus

PROFIBUS is the leading industrial communication system for manufacturing automation in Europe with strong growth in many other markets. PROFIBUS is supported by Siemens and is promoted by the PROFIBUS User Organization. Profibus products are certified by the PROFIBUS User Organization (PNO), guaranteeing worldwide compatibility.

The AcraDyne controller supports Profibus on the generic Anybus module. The controller can accept messages from a Profibus Client and return

responses to the Client.

Node Address: Configures the Anybus node address for controller.

Profibus DP

Supported Features:

The Anybus module supports the Profibus DP-V1 protocol. The DP-V1 is a communication protocol for acyclic data exchange and alarm handling. Profibus DP defines a network as masters and spindles based on their functionality. The ACRADYNE controller is considered a spindle device with inputs and outputs.

The Profibus Inputs and Outputs are addressed as:

- Input 1 byte 8 bits
- Input 1 word 16 bits
- Input 2 words 32 bits
- Input 4 words 64 bits (Currently not used)
- Output 1 byte 8 bits
- Output 1 word 16 bits
- Output 2 words 32 bits
- Output 4 words 64 bits (Currently not used)

Profinet

PROFINET is the innovative open standard for Industrial Ethernet, development by Siemens and the Profibus User Organization

ANYBUS Configuration	
ANTEOS Configuration	
Module Type	PROFINET IO 2-Port
Firmware	2.08 3
Serial Number	A0:28:31:6B
Module State	NW INIT
Network Supervised	No
Device Name	tc-1
Change to	

(PNO). PROFINET is based on Ethernet and uses TCP/ IP and IT standards and complements them with specific protocols and mechanisms to archive a good real-time performance.

Device Name: Configures the device name of the controller.

CC-Link IE Field

CC-Link IE **NYBUS** Configuration Field network CC-Link IE Field Network Module Type Firmware 1.14 1 is the first A0:39:69:E3 Serial Number gigabit Module State WAIT PROCESS industrial Network Supervised No Ethernet network Station Number 1 extended Network Number down to 0 the field

device level. It combines the best of existing technologies and applies them in a highly reliable architecture that provides exceptional data bandwidth and transaction rates. The new network uses commercially available Cat5E cable and RJ45 connectors.

Station Number: Configures the station number for the controller. Valid entries are 1 – 64.

Network Number: Configures the network number the controller is on. Valid entries are 0 – 239.

4.5.2.3 Anybus

These types of communication are useful for data communication between controller and PLCs. It is an effective, quick way for the data transfer of short data packages.

Example of the Anybus Input screen with five Inputs set up.

Element	7	6	5	4	3	2	1 0
0 - Byte	•	•		•	•		• 🔾
1 - Byte		•		•	•	•	• 📿
2 - Byte	۲	۲	•	۰			
3 - Byte	•	•	•	•	•		
4 - Byte	•	•	•	•	•		
+							

Click on \bigcirc to change an individual Element or return to Input Configuration screen.

Will delete individual Elements.

Element Type: Choose from Byte, Int16, Int32, or ASCII.

Element: Shows element # being configured

Bit (not shown): Enter Bit #.

Bits: # of bits the assignment will read.

Start at: Starting bit location.

Polarity (not shown): Select Normally Open (N.O.) or Normally Closed Outputs (N.C.).

Length (not shown, available in ASCII ID function): Number of characters desired to send.

Torque (not shown, available in Click Wrench function): Torque value to be reported when using Click Wrench input. Value input is what will be sent from controller when Input Signal is received from a Click Wrench. Value is NOT calculated by the controller rather it is solely what the Click Wrench is calibrated to by outside means.

Torque Units (not shown, available with Click Wrench function): Choose from Nm, Kgm, Kgcm, Ftlb, and Inlb.

Function: See the Gen IV Controller User Manual for more details. Select desired Input Function(s).

Click on ✓ after appropriate selections are made.
